Response to Arguments

The applicant argues that Oyagi fails to at least teach or suggest a user terminal of a telecommunication system, as claimed but teaches a DAB receiver. Further the applicant argues that the DAB receiver cannot correspond to, or communicate with, a user terminal, as claimed. In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See In re Keller, 642 F.2d 413,208 USPQ 871 (CCPA 1981); In re Merck & Co., 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

In re Fine, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and In re Jones, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, though the secondary reference does not teach a user terminal in the telecommunication system, the reference is still relevant art since it is in the field of wireless communications where the broadcast information is delivered over a wireless medium to the end user. Hence it is this teaching of Oyagi of exchanging associating data between the media receiver and the user terminal (See paragraphs 6, 33-37) that is used in modifying Sjoblom's invention. The motivation to modify Sjoblom with the above teaching of Oyagi is to provide various kinds of program information data to enhance user experience. Therefore the rejection of the claims as submitted in the previous office action and as discussed below is considered proper.

Art Unit: 2618

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-14 and 16-28, are rejected under 35 U.S.C. 103(a) as being unpatentable over Sjoblom [US 2004/0049779] in view of Oyagi [EP 1 191 722].

Regarding claim 1, Sjoblom discloses a method and apparatus for interactive television viewing. Sjoblom further discloses a method comprising:

- transmitting associating data for associating a media stream with a service; See paragraphs 7-11
- receiving in the user equipment, the associating data; See paragraphs 7-11
- configuring a system comprising the cellular telecommunication system and the broadcast system to provide the user equipment with the service associated with the media stream by using the associating data. See paragraphs 7-11

However, Sjoblom fails to disclose a method comprising exchanging associating data between the media receiver and the user terminal.

Oyagi, in the same field of endeavor, teaches a method comprising exchanging associating data between the media receiver and the user terminal. See paragraphs 6, 33-37.

Therefore it would have been obvious to one with ordinary skill in the art at the time the invention was made to provide the above teachings of Oyagi to Sjoblom in order to provide various kinds of program information data.

Application/Control Number: 10/511,768

Art Unit: 2618

Regarding claim 2, Sjoblom discloses a method comprising:

- storing automatically at least a portion of the associating data in the user equipment;

Page 4

11,57,62

- configuring the system by using the at least a portion of the associating data. 11,57,62

-

Regarding claim 3, Sjoblom discloses a method comprising providing the user equipment with

the service using the associating data. See paragraphs 8,9,39-47,84,85,90,91.

Regarding claim 4, Sjoblom discloses a method further comprising configuring the media

receiver to receive a media stream associated with the service. See paragraphs 8,9,39-

47,84,85,90,91

Regarding claim 5, Sjoblom discloses a method further comprising receiving the media stream.

See paragraphs 8,9

Regarding claim 6, Sjoblom discloses a method further comprising transmitting the associating

data for associating a media stream with a service synchronized with the media stream. See

paragraphs 8,9

Regarding claim 7, Sjoblom discloses a method further comprising transmitting associating data including at least one of location information. See paragraphs 15,90,91

Regarding claim 8, Sjoblom discloses a method further comprising:

- transmitting at least a portion of the associating data from the user equipment to a server providing the service for user equipment; see paragraphs 7-11,84,85,90,91

- configuring the server to provide the user equipment with the service by using the at least a portion of the associating data. see paragraphs 7-11,84,85,90,91

Regarding claim 9, Sjoblom discloses a method further comprising:

- requesting for configuration parameters for configuring the user equipment to access the service, by using at least a portion of the associating data; see paragraphs 7-11,15,90,91

- returning (408) the configuration parameters configuring the user equipment with the configuration parameters. See paragraphs 15,84,85,90,91

Regarding claim 10, Sjoblom discloses a method characterized by further comprising returning configuration parameters including at least one of location information See paragraphs 15,90,91

Art Unit: 2618

Regarding claim 11, Sjoblom discloses a method further comprising: displaying at least a portion of the associating data to the user and selecting from the at least a portion of the associating data by the user and configuring the system by using the item. See paragraphs 7-11

Regarding claim 12, Sjoblom discloses a method further comprising

- transmitting at least a portion of the associating data using the broadcast system and receiving at least a portion of the associating data using the media receiver; see paragraphs 7-11

Regarding claim 13, Sjoblom discloses a method further comprising transmitting at least a portion of the associating data using the cellular telecommunication system. see paragraphs 7-11

Regarding claim 14, 28 Oyagi further teaches a method comprising encoding at least a portion of the associating data into the media stream and decoding in the user equipment, the at least a portion of the associating data from the media stream. See paragraphs 19-22

Regarding claim 16, Sjoblom discloses a method comprising:

- a communication network of a cellular telecommunication system for providing the user equipment with mobile services; see Fig. 1,element 9 and paragraphs 10,31 and a

Art Unit: 2618

broadcast system for providing the user equipment with a media stream (see fig. 1, element 1 and paragraphs 7-9,31

- a user terminal in the user equipment for communicating in the cellular telecommunication system; see elements 7 and 11 in Fig. 1
- a media receiver in the user equipment for receiving the media stream; see elements 7 and 11 in Fig. 1

characterized in that the system further comprises:

- a server connected to the communication network for providing the user equipment with service associated with the media stream by using the radio interface of the cellular telecommunication system; see element 5 in Fig.1
- an associating data source for providing the user equipment with associating data for associating the media stream with the service See paragraphs 7-11,39-47,84,85,90,91
- wherein the user equipment is configured to receive at least a portion of the associating data; 11,57,62
- configuring means operationally connected to the user equipment and the server for configuring the system to provide the user equipment with the service associated with the media stream by using the associating data. See paragraphs 8,9,39-47,84,85,90,91

Regarding claim 17, Sjoblom discloses a method comprising:

- storing automatically at least a portion of the associating data in the user equipment; 11,57,62
- configuring the system by using the at least a portion of the associating data. 11,57,62

Regarding claim 18, Sjoblom discloses a method comprising providing the user equipment with the service using the associating data. See paragraphs 8,9,39-47,84,85,90,91

Regarding claim 19, Sjoblom discloses a method further comprising configuring the media receiver to receive a media stream associated with the service. See paragraphs 8,9,39-47,84,85,90,91

Regarding claim 20, Sjoblom discloses a method further comprising transmitting the associating data for associating a media stream with a service synchronized with the media stream. See paragraphs 8,9

Regarding claim 21, Sjoblom discloses a method further comprising transmitting associating data including at least one of location information. See paragraphs 15,90,91

Regarding claim 22, Sjoblom discloses a method further comprising:

- transmitting at least a portion of the associating data from the user equipment to a server providing the service for user equipment; see paragraphs 7-11,84,85,90,91

- configuring the server to provide the user equipment with the service by using the at least a portion of the associating data. see paragraphs 7-11,84,85,90,91

Regarding claim 23, Sjoblom discloses a method further comprising:

- requesting for configuration parameters for configuring the user equipment to access the service, by using at least a portion of the associating data; see paragraphs 7-11,15,90,91
- returning (408) the configuration parameters configuring the user equipment with the configuration parameters. See paragraphs 15,84,85,90,91

Regarding claim 24, Sjoblom discloses a method characterized by further comprising returning configuration parameters including at least one of location information See paragraphs 15,90,91

Regarding claim 25, Sjoblom discloses a method further comprising:

displaying at least a portion of the associating data to the user and selecting from the at least a portion of the associating data by the user and configuring the system by using the item. See paragraphs 7-11

Regarding claim 26, Sjoblom discloses a method further comprising

Art Unit: 2618

- transmitting at least a portion of the associating data using the broadcast system and receiving at least a portion of the associating data using the media receiver; see paragraphs 7-11

Regarding claim 27, Sjoblom discloses a method further comprising transmitting at least a portion of the associating data using the cellular telecommunication system. see paragraphs 7-11

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sujatha Sharma whose telephone number is 571-272-7886. The examiner can normally be reached on Mon-Fri 7.30am - 4.00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew D. Anderson can be reached on 571-272-4177. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
